Estimations Pilot – Information Request

INPROS · Prepared by Zenthic · November 6, 2026

To show the pilot working on your real data, we need the contract catalog, two or three past *estimaciones* with their *números generadores*, and the drawings that belong to the same contract. Everything else on this list is optional but makes the results more accurate and lets us measure the time saved.

Where we are today. The system already reads the 8 AutoCAD drawings you shared (electrical installation, 3rd floor, Oficinas Corporativas Ejército Nacional): it identifies every layer, counts symbols such as light fixtures (e.g. 322 type LAM-A), measures conduit and tray runs and extracts all text labels. What is missing is the contract and billing side, so we can compare **drawing vs. contract vs. what the contractor claims**.

Summary

#	What we need	Format	Priority
1	Contract catalog (*catálogo de conceptos*) incl. changes	Excel	A – required
2	2–3 contractor *estimaciones* + the version INPROS approved	Excel (PDF if no Excel)	A – required
3	*Números generadores* for those *estimaciones*	Excel / PDF	A – required
4	Drawings for the same contract, with revisions and legend	DWG	A – required
5	Billing zones / work fronts (*frentes*)	Plan or list	B – helpful
6	Field progress records for one period	PDF / photos / Excel	B – helpful
7	Current process: time and effort per *estimación*	Short answers / call	B – helpful
8	One technical report or bid evaluation template	Word / PDF	C – later phase

Important: items 1–4 must come from the **same project**. If the 8 drawings above have no catalog or *estimaciones* we can use, please choose a recent project (ideally electrical or MEP) where all four exist.

Details and data definitions

For each file, the original spreadsheet is much more useful than a scanned PDF. Column names do not need to match ours; we only need the information.

1. Contract catalog (catálogo de conceptos)

The list of contracted line items with quantities and unit prices. Include any change orders (*convenios modificatorios*) and extra items (*conceptos extraordinarios*).

Field	Description	Example
Clave	Line item code	IE-012
Descripción	Full item description	Suministro e instalación de luminario tipo A 2x32 W
Unidad	Unit of measure	pza, m, ml, lote
Cantidad contratada	Contracted quantity	300
Precio unitario	Unit price (state currency, with or without IVA)	1,250.00 MXN
Importe	Quantity × unit price	375,000.00
Partida / capítulo	Section or discipline the item belongs to	Instalación eléctrica – Alumbrado

2. Estimaciones (2–3 periods)

Both versions of each period: **what the contractor submitted** and **what INPROS finally approved** (with your corrections or notes). The difference between the two is exactly what the system should detect.

Field	Description	Example
No. de estimación / periodo	Number and dates covered	Est. 05, 01–15 Oct 2026
Clave	Catalog code, links to item 1	IE-012
Cantidad anterior	Quantity already paid in earlier estimaciones	120
Cantidad esta estimación	Quantity claimed this period	45
Cantidad acumulada	Running total	165
P.U. / Importe	Unit price and amount	1,250.00 / 56,250.00
Deductions	Retentions, advance amortization (*amortización de anticipo*), IVA	5% retención
Observaciones	Reviewer notes or corrections (approved version)	Se ajusta a 40 pzas

3. Números generadores

The quantity backup sheets that support each *estimación*: how each quantity was measured (location, axis or area, dimensions, partial counts). These tell us how your team measures, so the system measures the same way.

- Per line item: location (axis, area or room), measurement (length, count), partial and total quantity.
- Any sketches or marked-up plans used to justify quantities.

4. Drawings for the same contract

- The DWG set that was contracted (the version the catalog was priced on).
- Any later revisions, with their date and revision letter or number, so we can show **what changed between versions** and its cost impact (document control).
- The legend (*simbología*) that says what each symbol means, e.g. which block is a type A fixture. If your symbols follow a company standard, that standard is enough.
- Any external references (XREF files) the drawings depend on.

5. Billing zones / work fronts (frentes)

How the project is split for progress and billing (by floor, area, axis or *frente*). A marked-up plan or a simple list is enough. This lets us report progress per zone, the way you approve it.

6. Field progress records

For one of the periods in item 2: whatever the site team uses to report progress, e.g. *bitácora* entries, progress reports, photos, Microsoft Project updates. This lets us cross-check claimed quantities against what was reported on site.

7. Current process (for measuring results)

Short answers are fine; we can also cover this in a 20-minute call. These numbers become the pilot's success metrics.

Question	Answer
How many hours does one engineer spend reviewing one *estimación*?	
How many *estimaciones* are reviewed per month (all projects)?	
How many people are involved, and in which roles?	
What are the most common errors found (quantities, wrong code, duplicated items, prices)?	
How long is a typical approval cycle when a correction is needed?	

8. Technical report or bid evaluation template (later phase)

One example of a recurring report (*dictamen técnico* or bid evaluation) and its blank template. Not needed for the estimations pilot; it helps us plan the report-automation phase discussed in the meeting.

How to send it

- A shared Box folder is ideal, with one subfolder per item number above.
- Original files are best (Excel, DWG). Please do not convert spreadsheets to PDF.
- Partial data is fine to start: items 1 and 2 for a single specialty (e.g. electrical) let us begin.
- All data is used only for this pilot and is not shared with third parties. We are happy to sign an NDA first.
- Please name one contact (ideally the estimator who reviews *estimaciones*) for a short call to walk through one example.

Questions about this list: reply to this message and we will clarify.
